Walmart pulls plug on UK with TDRs $8.8bn Asda deal

WEALTH FUND ‘IN TALKS’ OVER URGENT SUPPORT TO TURKISH AIRLINES

UK’s first new deep coal mine in three decades approved
**Bloomberg**

**London**

Walmart said it will pull the plug on its UK operation, following its decision to sell its core operations to TDR Capital for $8.8 billion. The US retail giant, which has been operating in the UK for over a decade, said it will not pursue a sale of its business to a private equity firm, leaving its Future Group to consider the future of its operations.

The decision comes after Walmart announced in October that it would sell its UK business to Norwegian private equity firm TDR Capital. The deal was subject to regulatory approval, but Walmart said it had decided to pull out of the UK market.

The sale will be a blow to the UK retail sector, which has been hit by the ongoing pandemic and a slowdown in consumer spending. Walmart has been operating in the UK since 1991 and has around 2,500 stores and 67,000 employees.

The company’s exit will also impact its supply chain, as it has major distribution centres in the UK.

**Google asks workers who went abroad for Covid to return**

**San Francisco**

Google has asked employees who traveled abroad for Covid-19 to return to work, as part of its efforts to keep its workforce safe during the pandemic. The US technology giant, which has been operating in the US since 1994, said it had asked employees to return to work from abroad to work remotely.

The move comes after the company announced in March that all employees would be required to return to work from abroad.

**UK found ‘critical weakness’ in Huawei equipment**

**London**

British intelligence agencies have found “critical weaknesses” in Huawei equipment, which they believe could be used to compromise UK networks and systems.

A report by the National Cyber Security Centre (NCSC), which is responsible for protecting the UK’s critical national infrastructure, said that Huawei’s equipment could be used to access UK networks and systems.

The report, which was published on Friday, said that Huawei’s equipment could be used to access UK networks and systems.

The report was based on an analysis of Huawei equipment and systems by the NCSC, which said that the equipment could be used to access UK networks and systems.

The NCSC also said that Huawei’s equipment could be used to access UK networks and systems.

ByteDance is working to resolve TikTok concerns as sale process drags on

B loomberg

Brickell

By SCOTT MAYEROWITZ

TikTok’s parent company, ByteDance, on Monday announced a series of measures to address U.S. concerns about the sale of the video-sharing app to avoid a ban.

The Chinese company said it would not allow the sale to go forward without a final court decision resolving all legal challenges.

The announcement came just days after a federal judge in Washington stayed a行政机关's court order that would have forced the sale of TikTok to Oracle Corp. and Walmart Inc.

ByteDance said it was committed to ensuring the sale of TikTok is completed in a timely and orderly manner.

The announcement comes as the Trump administration faces pressure to complete the sale, which has been stalled by a series of legal challenges.

The government has said it is concerned about the sale because TikTok could be used to collect personal data and influence U.S. elections.

But ByteDance said it was making progress on the legal challenges and would continue working with the federal government to complete the sale.

The announcement comes amid growing concern that the sale could be blocked by the U.S. government, which has been seeking to block the deal.

ByteDance said it would continue to work with the government to resolve any remaining issues and ensure the sale is completed.

The announcement comes as the company faces a number of legal challenges to its sale to Oracle and Walmart, including a lawsuit filed by the Chinese government.

ByteDance has said it is committed to protecting user data and ensuring the sale is completed in a timely and orderly manner.

The company has also said it is not seeking to influence U.S. politics and is not a threat to national security.

The announcement comes as the company faces growing pressure from the U.S. government, which has been seeking to block the sale.

Yuan’s best quarter in 12 years boosts status as haven

The Chinese yuan is drawing attention again in 2020, partly because it could help anchor global financial markets around the world. The currency has gained almost 4% in the three-month period ending September 30, the most since early 2018, while its offshore counterpart advanced almost 4.5%. That would push the Citigroup Emerging Markets Currency Index to a 10-month high.

China’s central bank has been “very visible and very vocal” in recent months, with top officials saying repeatedly that China will focus on stability and steady growth. The yuan has been strong but not too strong, which has helped the country maintain its competitive edge.

The currency has gained more than 5% against the dollar since the start of the year, making it the strongest currency among the 10 largest economies.

The yuan has not been immune to volatility. It has lost around 8% against the dollar since the start of the year, but it has regained some ground recently.

The yuan is also gaining ground against other emerging-market currencies, with gains of more than 4% against the Mexican peso, the Russian ruble, and the South Korean won.

The yuan’s rally has been helped by China’s strong recovery from the coronavirus pandemic, which has boosted investor confidence. The country’s manufacturing PMI reading has stayed above 50 for most of the year, indicating growth.

The yuan’s gains have also been helped by the fact that the country has not been hit as hard by the pandemic as some other major economies.

The yuan’s rally has not been without its risks. Some investors are concerned that the country could become too reliant on its currency to drive growth. But the yuan’s gains have also been helped by the fact that the country has not been hit as hard by the pandemic as some other major economies.

Dollar and yen jump after Trump tests positive for coronavirus

Emerging markets equities and currencies retreat

The dollar rose and the safe-haven yen rose sharply on news that US President Donald Trump has tested positive for Covid-19, jolting a market that had become accustomed to calm.

The dollar hit a two-year high against the yen on Monday morning, with the USD/JPY rate climbing above 107.50. The yen’s gains were also helped by the fact that the US economy has been hit harder by the pandemic than many other countries.

The dollar’s gains were also helped by the fact that the US economy has been hit harder by the pandemic than many other countries.

The dollar also rose against other major currencies, with the USD/GBP rate climbing above 1.30 on Monday morning. The dollar also rose against the euro, with the USD/EUR rate climbing above 1.18.

Tokyo Stock Exchange wraps up busy session after recovering from outage debacle

The Tokyo Stock Exchange wrapped up a busy day with a recovery from an outage that lasted more than two hours.

The exchange was down for more than two hours on Thursday, causing a plunge in the Nikkei 225 index and other indices.

The exchange has been working to improve its systems since the outage, which was caused by a power failure.

World stock markets slide after Trump catches Covid-19; London’s FTSE 100 recovers

London’s FTSE 100 ended higher yesterday as markets recovered from the initial shock of US President Donald Trump testing Covid-19 positive and a 4% plunge in some European bourses after the news. The index closed up 4% after being as much as 1.5% lower, taking weekly gains to 1% after two weeks of losses.

This is a good news-tile-based approach given that President Trump may need a medical team to check in on the President and monitor his health, some market analysts said.

While President Trump has tested positive, the markets see this as a significant development. It is unclear how long the market will remain volatile, and the index is likely to remain choppy in the weeks ahead.

The news is likely to have a positive impact on the market, as investors are reassured that the risk of a second wave of infections is lower. However, the market is still feeling the impact of the coronavirus pandemic, and it is unclear how long the recovery will last.

In the meantime, the FTSE 100 is expected to remain volatile, with the market reacting to news and events as they unfold. Investors are likely to remain cautious, as the virus is still a major concern for the global economy.

Italy likely to revoke Benetton toll contract, says minister

Bloomberg

Italy will likely strip the Ferrari family’s auto-racing team of its role in managing the country’s highways, its government said today, as the country seeks to end a long-running dispute.

Silvio Berlusconi, who is leading the government, said in a statement today that the contract between Benetton, Ferrari’s parent company, and the Italian government would be dissolved.

The contract, which was signed in 1991, allowed Benetton to operate the country’s toll roads for a 40-year period, with the possibility of renewal.

But the government has been seeking to end the contract because it believes Benetton has failed to meet its obligations.

“Benetton has not been fulfilling its obligations as agreed under the contract,” the statement said.

Berlusconi said the government would now begin negotiations with other companies to take over the management of the toll roads.

He added that the government was also considering introducing new rules to improve the efficiency of the toll road system.

The announcement came just days after Benetton said it was reviewing its strategy for the Italian market, following a series of legal battles with the government.

Benetton has been accused of failing to maintain the roads in good condition and of not collecting enough tolls.

The new rules would include measures to increase the number of toll booths and to make it easier for drivers to pay their tolls.

The government has already announced plans to introduce a new toll system, which would involve electronic payments on a prepaid card.

The new system is expected to come into effect in 2023.
Spain’s labour market improves despite new Covid wave

Spain’s labour market improves despite new Covid wave

**Business**

Spain

More than three quarters of Spain’s 2.6 million workers have returned to a more normal social security status, following a dip in unemployment that started in the summer of 2020. In November, 72.8% worked and were insured, an increase of 1.7% from the previous month. November is traditionally a month of strong job creation in Spain, and this year’s increase is particularly significant given the continued uncertainty of the pandemic.
