Arabosai chooses Qatar as its representative for Intosai for 2022-2022

Qatar may see higher public revenue and another fiscal surplus in 2022, says EIU

For outdoor dining, Qatar is expected to see a surge in demand as the country prepares for the FIFA World Cup 2022. The EIU expects Qatar’s GDP to grow by 3.5% in 2022, driven by the country’s efforts to boost non-oil exports and diversify its economy. The country has been focusing on developing sectors such as tourism, logistics, and real estate to support its economic diversification efforts.

The event is expected to attract a large number of visitors, including government officials, businesses, and citizens, who will be able to learn about the latest developments in the field of real estate and construction.
**Bloomberg QuickTake Q&A**

**What's a Minsky moment, and why should you worry about one?**

By Brian Gardner

The most famous of Minsky moments was an oil-price shock and a commodity bubble that ended oil's decades-long bull market. The theory behind that was the work of folk economist Hyman Minsky, who argued that too much debt could be a bad thing. The idea is that, when you have too much debt, a small event can cause a big shock.

**What makes a Minsky moment?**

The letter is to the end stage of a mounting pressure on a capital flow's structure, which can be a result of a lot of factors. For example, if there's a bubble in the housing market, you could have a Minsky moment when the housing market begins to fall, and banks start to lose money.

**Banks are at risk in a Minsky moment?**

Yes, in 1989, following the bursting of asset markets in Asia, Minsky reflected on his famous model and decided to adjust it. In doing so, the model could not be adjusted to be a good model of the US subprime mortgage market.

**How do I protect my wealth?**

Investing abroad is one of the best ways to protect your wealth. By diversifying your investments, you can reduce your risk.

Russia's war lifts default risk for depressed economies

The S&P 500 slipped on Friday as investors weighed the impact of Russia's war on global economies. The benchmark US index fell 2.2% to 4,548.07, its lowest close since early 2020.

The US Treasury yield rose to 2.94% from 2.83% earlier in the week. The euro was trading at $1.0920, down from the $1.11 mark earlier in the month. The British pound was at $1.26, down from $1.28 in early March.

Asian markets were mixed as traders weighed the potential impact of the war on their economies. The Nikkei 225 in Japan was down 1.6% to 26,485.27, while the Shanghai Composite was down 1.4% to 3,239.96.

In Russia, the Ruble fell to a record low against the US dollar, hitting 101.07 RUB/USD, up from 89.80 in early March.

In Europe, the FTSE 100 in the UK was down 2.5% to 7,342.50, while the DAX in Germany was down 2.3% to 14,264.76.

The Russian ruble has fallen by more than 30% against the US dollar since the start of the war.

The war has had a significant impact on the global economy, with oil prices soaring and uncertainty increasing.

Wells Fargo’s $28bn oil lenders ready for boom

O nce a year after Wells Fargo’s analysts make a new set of projections, people in the industry sit up and take note. Two years ago, as the old dot-com bubble burst and the oil majors were looking for capital sources, Wells Fargo’s oil forecasts were widely mocked for their huge pessimism. Now, the new forecasts are being taken very seriously, and Wells Fargo’s investors are on their toes. The company is one of the top three most popular banks in the world, and it is seen as a bellwether for the industry.

The analysts say that oil prices will rise sharply in the coming months, driven by supply constraints and strong demand. They predict that the oil market will be in a state of “super-tightness,” with a scarcity of oil and gas. This will lead to a significant increase in the price of oil, with Brent crude prices reaching $100 per barrel by the end of the year.

The analysts also predict that the oil market will remain strong for the next few years, with demand continuing to grow and supply constraints persisting. This will lead to a continued upward trend in oil prices, with Brent crude expected to reach $120 per barrel by 2023.

The strong outlook for the oil market has led to a surge in interest from investors, who are looking for opportunities to invest in the industry. This has led to a significant increase in the volume of oil loans made by banks, with Wells Fargo leading the way.

The analysts say that the strong outlook for the oil market will continue for the next few years, with demand continuing to grow and supply constraints persisting. This will lead to a continued upward trend in oil prices, with Brent crude expected to reach $120 per barrel by 2023.

ister of the Agriculture and Food Security Ministry, Dr. Ali Al-Mansour, said that the Arabosol meeting is one of the important meetings of the Arabosol Bureau of the Arab World which witnessed many developments and achievements in the field of Arabosol and represented the advancement of Arabosol and the adoption of modern capabilities in the regulatory sector. (Emir Sabri Al-Mansur)

Mena CEOs attract greater importance to ESG: EY

The Middle East and North African (MENA) corporate landscape is maturing to a state of sustainability in which businesses are beginning to recognize the importance of reducing their carbon footprint and making conscious decisions to reduce their environmental impact. "MENA-region companies are beginning to express interest in sustainability and ESG. As a result, the focus on sustainability is shifting from just the large, well-capitalized companies to the small and medium-sized companies," said Anthony El-Badrawy, partner and head of EY MENA's Sustainability & Climate Change service.

The report also showed that 98% of MENA companies see a significant or very significant impact from climate risk, which is even higher than in other regions. This is especially true for companies operating in the energy, real estate, and finance sectors. The report also highlighted that the adoption of sustainable practices by companies is not only beneficial for the environment but also for their bottom line.
